Cyber Alert – Cyber Incident Response Plan

The CyberScotland Partnership have published a Cyber Incident Response Pack to provide practical advice to businesses on how to handle a cyber-related incident. The documents will compliment any existing Incident Response Plan or can assist organisation in creating one.

Best suited for small businesses or charities that don't have in-house incident response teams, the easily digestible pack includes longer length advisory pieces on reputation management and legal considerations. It also contains checklists and editable documents which centralise the important contacts businesses must speak with when experiencing a cyber incident.

The Incident Response Pack contains:

- **Incident Response Guide Introduction**
- **Prepare Your Business Checklist:** Use this checklist to help prepare for, respond and recover from cyber incidents.
- **Emergency Contact List Template:** Use this word document to capture business emergency contact details.
- **Incident Response Communications:** Core questions you need to address when planning and dealing with a crisis.
- **Legal Implications of a Cyber Incident:** Awareness of key commercial and legal implications of a cyber incident. Who do you need to report to and by when?

The pack is available to download on the Cyber Scotland website via this link
